

CODEORBIT TECH · INTERNSHIP PROGRAM

CO

Full Stack Development Internship

Tech This internship program offers hands-on, beginner-friendly experience in full stack web development. CodeOrbit Tech is dedicated to helping students build practical skills in a supportive, mentor-guided environment. Tasks have been kept simple and approachable so that interns at any skill level can complete them with confidence while still learning real, applicable front-end and back-end development concepts.

1 Month Internship · 3 Tasks

1.5 Month Internship · 4 Tasks

2 Month Internship · 6 Tasks

1 Internship Perks

- ✓ Internship Offer Letter
- ✓ Completion Certificate (QR Verified)
- ✓ Unique ID Certificate
- ✓ Letter of Recommendation (based on performance)
- ✓ Job Opportunities / Placement Support
- ✓ Resume Building Support

INSTRUCTIONS FOR INTERNS

- 1 Share your internship status on LinkedIn, tagging @CodeOrbitTech.
- 2 Complete the assigned tasks within your internship time frame (see your tier below).
- 3 Upload your complete source code to GitHub in a repository named: CodeOrbit_ProjectName
- 4 Post a short video explanation of your project on LinkedIn with your GitHub repo link, for at least one project out of the tasks given to you.
- 5 Submit your completed task using the Submission Form shared in your WhatsApp group.

2 Task List by Internship Duration

Tasks have been organized into three internship durations. Each tier builds on the same easy task set, so interns naturally progress from simpler to slightly more advanced work as the internship length increases.

1 Month Internship — 3 Tasks

Complete minimum 2 tasks

You must complete a minimum of 2 of the 3 tasks below to be eligible for the internship certificate.

1 Personal Portfolio Website

- Build a simple personal portfolio website using HTML, CSS, and basic JavaScript.
- Include sections such as About Me, Skills, Projects, and Contact.
- Make the layout responsive so it looks good on both desktop and mobile.
- No frameworks required — focus on clean structure and styling.

2 To-Do List Web App

- Create a simple to-do list app where users can add, edit, and delete tasks.
- Use HTML, CSS, and JavaScript for the frontend.
- Store tasks in the browser using localStorage so they persist on reload.
- Keep the interface clean and easy to use.

3 Simple REST API with Node.js

- Build a basic REST API using Node.js and Express.
- Create endpoints to add, view, update, and delete simple records (e.g., notes or contacts).
- Use an in-memory array or a simple JSON file for storage — no database setup required.
- Test your endpoints using Postman or a similar tool and add comments in your code.

Important Note

Internship Completion Criteria: To be eligible for the internship certificate, participants must complete the minimum number of tasks listed for their internship duration tier above. Submitting fewer than the required minimum will be considered incomplete, and certificates will not be issued in such cases.

Submission Details: A submission form link will be shared with you. You are required to submit your completed tasks only through this link. Please follow the instructions mentioned in the form carefully to ensure your submission is accepted.

1.5 Month Internship — 4 Tasks

Complete minimum 3 tasks

You must complete a minimum of 3 of the 4 tasks below to be eligible for the internship certificate.

1 Personal Portfolio Website

- Build a simple personal portfolio website using HTML, CSS, and basic JavaScript.
- Include sections such as About Me, Skills, Projects, and Contact.
- Make the layout responsive so it looks good on both desktop and mobile.
- No frameworks required — focus on clean structure and styling.

2 To-Do List Web App

- Create a simple to-do list app where users can add, edit, and delete tasks.
- Use HTML, CSS, and JavaScript for the frontend.
- Store tasks in the browser using localStorage so they persist on reload.
- Keep the interface clean and easy to use.

3 Simple REST API with Node.js

- Build a basic REST API using Node.js and Express.
- Create endpoints to add, view, update, and delete simple records (e.g., notes or contacts).
- Use an in-memory array or a simple JSON file for storage — no database setup required.
- Test your endpoints using Postman or a similar tool and add comments in your code.

4 User Login & Registration System

- Build a basic login and registration page using HTML/CSS for the frontend.
- Create a simple backend with Node.js/Express to handle signup and login requests.
- Store user details in a simple database such as MongoDB or a JSON file.
- Use basic password handling and show clear success/error messages to the user.

Important Note

Internship Completion Criteria: To be eligible for the internship certificate, participants must complete the minimum number of tasks listed for their internship duration tier above. Submitting fewer than the required minimum will be considered incomplete, and certificates will not be issued in such cases.

Submission Details: A submission form link will be shared with you. You are required to submit your completed tasks only through this link. Please follow the instructions mentioned in the form carefully to ensure your submission is accepted.

2 Month Internship — 6 Tasks

Complete minimum 4 tasks

You must complete a minimum of 4 of the 6 tasks below to be eligible for the internship certificate.

1 Personal Portfolio Website

- Build a simple personal portfolio website using HTML, CSS, and basic JavaScript.
- Include sections such as About Me, Skills, Projects, and Contact.
- Make the layout responsive so it looks good on both desktop and mobile.
- No frameworks required — focus on clean structure and styling.

2 To-Do List Web App

- Create a simple to-do list app where users can add, edit, and delete tasks.
- Use HTML, CSS, and JavaScript for the frontend.
- Store tasks in the browser using localStorage so they persist on reload.
- Keep the interface clean and easy to use.

3 Simple REST API with Node.js

- Build a basic REST API using Node.js and Express.
- Create endpoints to add, view, update, and delete simple records (e.g., notes or contacts).
- Use an in-memory array or a simple JSON file for storage — no database setup required.
- Test your endpoints using Postman or a similar tool and add comments in your code.

4 User Login & Registration System

- Build a basic login and registration page using HTML/CSS for the frontend.
- Create a simple backend with Node.js/Express to handle signup and login requests.
- Store user details in a simple database such as MongoDB or a JSON file.
- Use basic password handling and show clear success/error messages to the user.

5 Full Stack Notes/Blog Application

- Build a simple full stack app where users can create, read, update, and delete (CRUD) blog posts or notes.
- Use a frontend (HTML/CSS/JS or React) connected to a backend API (Node.js/Express).
- Use MongoDB or any simple database to store the posts.
- Display all posts on a clean homepage with options to edit or delete each one.

6 Product Listing Page with Cart (Mini E-Commerce)

- Create a simple product listing page displaying a small set of sample products (name, image, price).
- Allow users to add products to a cart and view the cart with a total price.
- Use a basic backend to serve product data via an API, or a simple JSON file if a database isn't used.
- Keep the design simple and beginner-friendly — no payment integration required.

Important Note

Internship Completion Criteria: To be eligible for the internship certificate, participants must complete the minimum number of tasks listed for their internship duration tier above. Submitting fewer than the required minimum will be considered incomplete, and certificates will not be issued in such cases.

Submission Details: A submission form link will be shared with you. You are required to submit your completed tasks only through this link. Please follow the instructions mentioned in the form carefully to ensure your submission is accepted.
